**CIS331**
**Instruction for submission of Homework Assignments**

1. **First: Right click and "Run File" to build and run your file to make sure it works:**

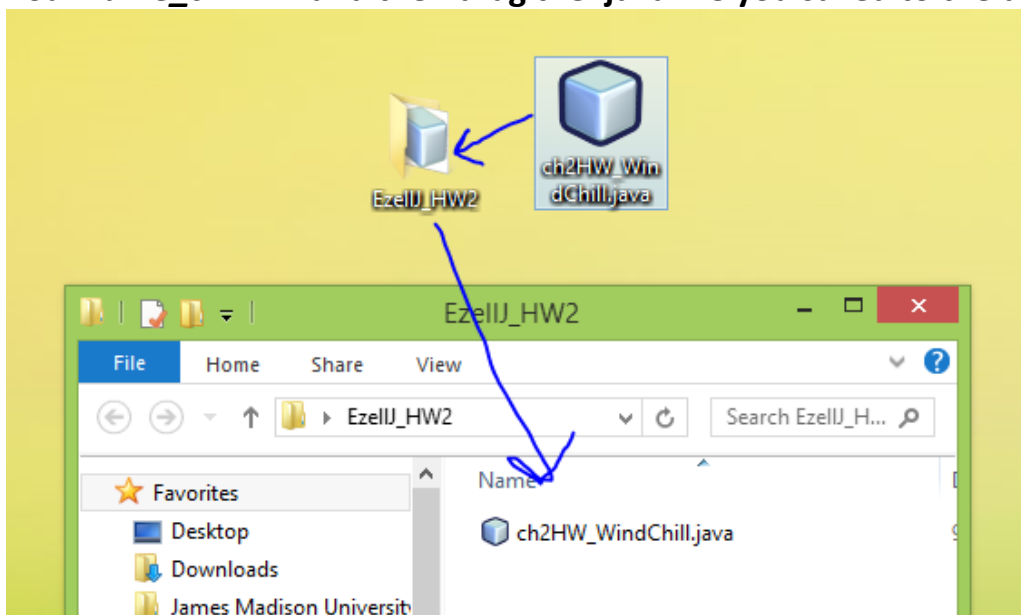

2. **Next, *just for homework submissions*, comment out the "package" line at the top of your file:**

Next page ---->

3. Click on File -> Save As (Make sure you click Save As and not Save!) and save your homework file to the desktop or some other folder where you feel comfortable placing it:

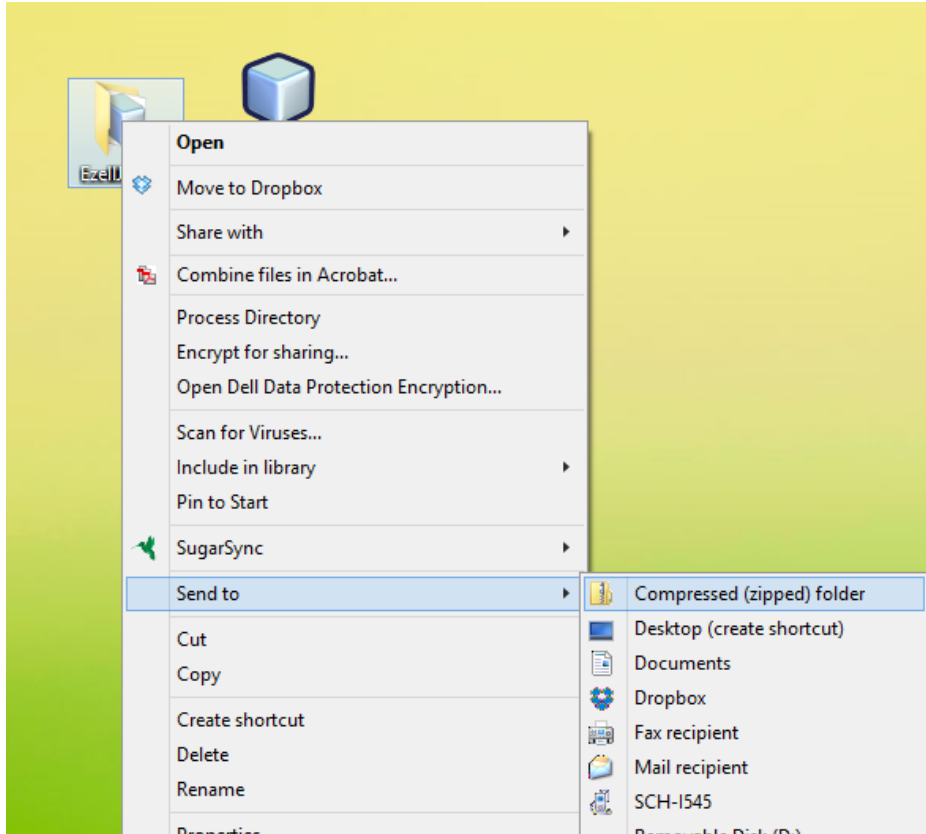

4. Once on the desktop or saved elsewhere, create a folder and call it something like *YourName_ch2HW* and then drag the .java file you saved to the desktop into the folder:

Next Page ====➜

5. **In Windows, right click on the folder, choose "Send To. . ." -> "Compressed Zipped Folder" (In Mac OS X, "Add to Archive" should do the trick):**

6. **You will submit this ZIP file to canvas as your homework submission.**

7. ****NOTE: Back in Netbeans, *close* out your homework file (click the little "x" on the tab at the top) then open it back up. You should notice and make sure that the "package" line is now *uncommented out*. We will only ever comment these out for homework assignment submissions. Normally, leave them in.**

```java
package ch2;
public class ZipExample {
    public static void main(String[] args) {
        // Print message to user
        System.out.println("Mathematical compression of "
                + "file data is fun!");
    }
}
```
